WHERE IT POURS, WE REIGN.

The Continental Express & Paver Mixers. The standard of quality and performance in the ready mix industry.

The Continental Express & Paver Mixers are the most advanced mixers in the industry. Their faster. Stronger. And more reliable than anything on the worksite. When we make our mixers, we begin by thinking about you. So each mixer is thoughtfully engineered by people who know the job. Solid welds. Fastest designs. Lighter materials. Exceptional strength. All to make a better, more reliable, more cost-effective machine for you, from the day you buy it until the day you sell it. As always, our products are manufactured to exceed industry standards. We want Continental Mixers to be the foundation upon which you build a great business.

DEMAND THE PERFECT MIX

ZT GEARBOX

Custom built for the Ready Mix industry, these high torque, 4 planetary gearboxes with an all metal cage and double sealed construction are the muscle in our mixers. Built rock solid – keeping you and your business running strong.

EATON HYDRAULIC COMPONENTS

Renowned as the most reliable hydraulic components in the industry, we build with nothing else. Giving you more than peace of mind, it gives you power when you need it, with downtime being an afterthought.

MIXER HEAD

Continental Mixers created our own, specially fabricated drum head section, so unlike the dished head used by the competition, ours is stronger, more wear resistant and gives you more working life and bang for your buck.

DRUMS AND FINS

We start with abrasion and corrosion resistant high strength steel, then weld all drum seals inside and out for the ultimate strength and water tightness. Our fins are solid (GMAW) welded rather than skip welded as well. Raw strength that delivers a longer lasting drum that's ready for punishment.

FINS AND FLANGES

Designed using state-of-the-art computer models, these proprietary features deliver a guaranteed optimal mixing rate and controllable discharge flow. Helping you pour up to 23% faster, even with zero slump. Who doesn't want to get more done in less time?

FRONT PEDESTAL

Continental's front pedestals are lower, wider and more accessible than those used by the leading competitor. This lower center of gravity not only makes it easier for your operators, it makes it safer as well because this design is much more resistant to roll-overs. You know what they say about the right tool for the job...

DRUM ROLLERS

Our drum rollers are larger, designed for easy access and are placed on 1" metal plates. Making ours much more durable than any other roller in the use today.

CHUTES AND ROCK BLOCKER

Continental's chutes use solid welded seams. The innovative, simple and super safe RockBlocker is incorporated into every Continental Mixer. Continental's chutes resist deforming and rust and outlast those made by the competition. The RockBlocker provides safety for the operator and trailing vehicles.
